

Pharmacount HD Tech-pack

- 16 Infrared LED's with 46 individual scan paths that are scanned every millisecond gives 46,000 scans per second
- Multi LED analysis the system will detect chips and partial tablets with much higher accuracy than standard infrared systems and track identified chips etc into a bottle for rejection.
- "Onboard" microprocessor monitors and trends output power to optimise performance.
- No calibration required ever!!

- Super high speed infrared sensors – Four times faster scan speed than competition
- Products as small as 2.5mm counted with high accuracy
- Automatic learn process to determine minimum and maximum dark time setup
- Individual LED analysis with histogram records to determine typical beam disruption
